Congratulations

On your new Hegel SUPER, headphone amplifier. As with all Hegel products it is designed with the sole purpose of bringing you as much of the music as possible, stripped of distortion, noise and other pollution. We hope it will give you great listening pleasure, and that it will continue to do so for many years.

WARNING - Important safety instructions

Below are a few very important safety instructions, that you should read before use.

- Playing music at excessive sound levels through headphones may cause permanent damage to your hearing
- Do not have the headphones over your ears when connecting, or disconnecting, the headphones or USB cable.
- Always use the computer's master volume attenuator, not just the one in the media player, as loud system-generated sounds may damage your ears.
- When trying new equipment, always start it up with your headphones away from your ears.
- Hegel is not liable for harm caused by not following these instructions

Quick set-up:

a: Connect the micro USB cable to the SUPER and your computer.
b: Connect your headphones as shown in the connection guide but to not yet put them over your head.
c: Lower the computer's master volume attenuator to "minimum".
d: Start playing your favorite music (or perhaps just music), and adjust the volume to your desired level.
e: If there is no sound, check the output settings in your operating system or media player.
